

Bucket Dispenser

Instruction

Diatom-X Kiselgur is delivered in an air-sealed container to avoid any leakage and dust from small particles. The container cannot be opened as an ordinary bucket, rather it is intended to be used as a dispenser after the following modification.

Select the alternative below which suits your intended use of the product. Note: If the package needs to be re-sealed after use (e.g. for transport) then make sure to holes or cut-out can easily be sealed with duct tape.

If you need to open the bucket (e.g. for re-use) then strength is required or you can use a screwdriver or similar tool. Lift the tab on the side of the lid and remove seal strip around the whole base of the lid. Go around the outside of the lid and lift the edges to loosen it, then pull the lid off.
