

Nattaro Safe – Instruction for installation on bed

Clean surface before installation

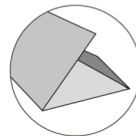

1. Remove the protective film and attach to the clean surface
2. Press firmly while attaching the bed bug tape to the surface and remove the protective film

3. Press firmly with a piece of cloth along the entire length of the attached strip

4. Open tabs gently into a triangular shape

- Nattaro Safe adheres best to wood and metal, however it also works for surfaces made of textiles, plastic etc
- Apply extra attention to the installation in the corners of the bed
- Use a pair of scissors to cut the lengths
- Some powder will always fall out during installation, this will not impair the efficacy of the product
- There is no need for inspection of the inside of the tape
- Replace missing or broken pieces continuously
